

PICARRO

offers superior natural gas leak detection

1,000 X's Stronger

More sensitive than the traditional process for detecting methane leaks

10-Hour Shift

Optimal survey time is at night when the ground is cooler and natural gas doesn't rise as quickly as during the day

15% Efficiency Improvement

Picarro has helped increase our leak detection efficiency

Looks Like a Camera

But no pictures are taken. Identifies up to five-times more leaks versus older surveying methods

Identify Areas of Potential Leaks

Picarro can identify areas of potential leaks moving up to 40 mph

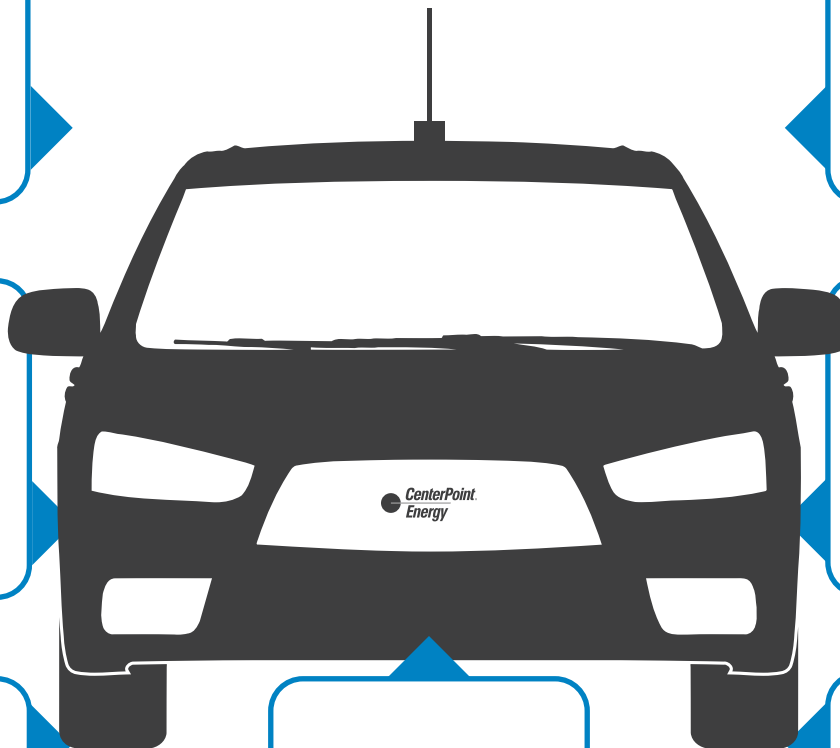

15 Picarro Units

We own 15 units - one of the largest fleets in the industry

30 Miles of Gas Mains

Picarro can cover 30 miles of gas mains and service lines per night

Better, faster technology with real-time results.

Investing in cutting-edge technology like the Picarro Surveyor helps us operate safely, improve service performance and reduce emissions.
