

SERVICE REQUIREMENT INFORMATION

Prospects have specific energy needs to meet the operational demands of their businesses. Operations such as large manufacturing, process plants and data centers have energy needs that often limit site options. In most cases, these enterprises would be served by CenterPoint Energy's existing distribution infrastructure. However, a small number of customers may require new connections to access our electric transmission or gas pipeline service. To help make this determination for your prospect, complete this form and fax it to 713-207-9102.
