# NATURAL GAS BOOSTER WATER HEATER BOOSTS BOTTOM LINE

## Low operating costs and a \$500 rebate are popular at Hopkins High School

For sparkling dishes and low-operating costs, the Hatco natural gas booster water heater has been an excellent add-on to Hopkins High School's natural gas dish machine. The foodservice staff is enjoying the convenience of hot water when they need it and are confident that dishes are bacteria-free for the 1,200 lunches they serve each school day. It also helps the staff keep up with their catering orders.

**Lower operating costs.** Compared to an equivalent electric model, the Hatco natural gas booster water heater saves the school about \$1,000 per year in operating costs.

**\$500 CenterPoint Energy rebate.** The high-efficiency equipment qualified for a rebate, which helped the school jump-start their savings.

**Sparkling clean dishes without added chemicals.** Reliably rinses dishes at 180 F for clean, sanitized results.

**"It's a good product,"** reports Glen Ritter, assistant foodservice director. **"It's reliable, easy-to-maintain and saves our district money. It will quickly pay for itself with energy savings."**

**For more information.** To learn more about how the Hatco natural gas booster water heater can lower your operating costs, contact YES Distributing/Melville Marketing. To test or train on equipment or learn about rebates, contact CenterPoint Energy.
