FOR RELEASE: October 02, 2009

The National Thermodynamic Laboratory, a start-up company from Texas A&M University at Galveston, has opened its doors on Pelican Island. The Galveston Economic Development Partnership has worked with representatives of National Thermodynamic Laboratory for several years on this exciting new process technology. The National Thermodynamic Laboratory's mission is three fold: to provide industry with the most accurate pilot plant and measurement laboratory facilities; to research and develop future fuels technology based on bio-organics, nuclear, solar, and ocean resources; and to set standards for environmentally safe processes.
