

What will my pruned tree look like?

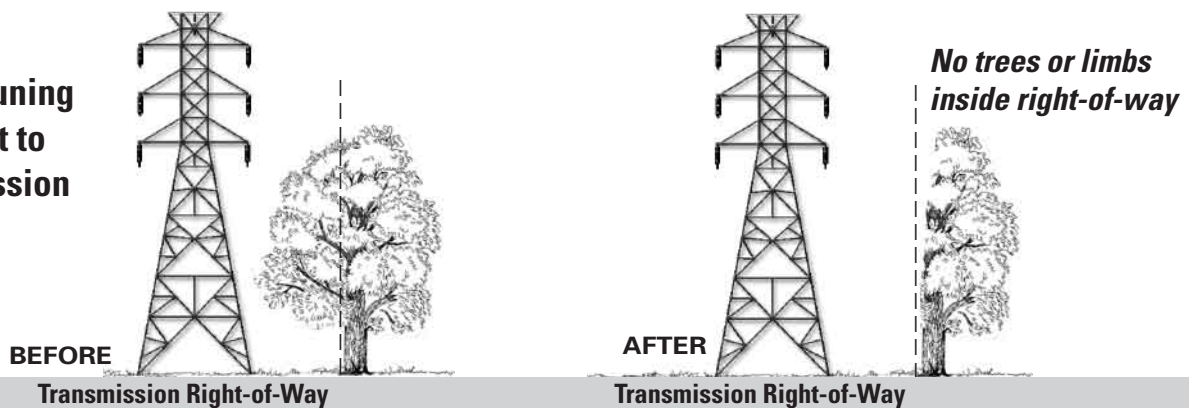

V-Pruning around distribution lines

Side-Pruning around distribution lines

Side-Pruning adjacent to transmission lines

CenterPoint Energy prunes trees that could interfere with the safe and reliable operation of our power lines.

We employ degreed foresters to work with qualified tree-pruning contractors to prune and train trees to grow away from power lines. CenterPoint Energy's tree-pruning practices are based on national standards.

The National Arbor Day Foundation has recognized CenterPoint Energy for using tree-pruning best practices to care for trees while meeting our service commitments.

Always There.®
