

Delivering Comfort and Efficiency to YOU

Warm up with natural gas rebates.

CenterPoint Energy's rebate program for heating systems for smaller buildings or supplemental heat can help you more affordably add new, high-efficiency natural gas equipment or upgrade your existing heating system with retrofit equipment.

Other heating systems

Equipment	Rebate	Efficiency rating
Forced-air furnaces	\$150/furnace	92% - 93.9% AFUE
Forced-air furnaces	\$300/furnace	94% - 95.9% AFUE
Forced-air furnaces	\$400/furnace	≥96% AFUE
Condensing unit heaters	\$300/heater; not to exceed 25% of equipment cost	≥88% thermal efficiency
Condensing condo packs	\$150/unit	≥90% efficiency, single package vertical unit
Infrared heaters	\$250/heater	Low-intensity tube-type
CO garage sensors	\$100/sensor	Retrofit only
Energy recovery wheels and plates	\$0.25/CFM	Outside air through device
Demand control ventilation	\$100/sensor	Retrofit only

More great energy-saving programs

Install a high-efficiency **natural gas water heater** with an ≥88 percent thermal efficiency and get a rebate of \$200 per 100,000 Btu input. Plus, we have rebates for **power vent and atmospheric tank water heaters** that are ≥.64 UEF, ≥.68 UEF and ≥.80 UEF.

More great energy-saving rebates available for:

- **Natural gas water heaters**
- **Boiler systems**
- **Boiler system components** — turbulators, burners, stack dampers, steam trap repair/ replacement, reset and cut-out controls, pipe insulation and linkageless controls
- **Boiler tune-ups**

Discover your energy savings.

A Natural Gas Energy Analysis can help cut costs for businesses of any size*. A certified energy auditor will visit the facility, inspect the building envelope and install natural gas equipment. The auditor will also examine how the equipment is operating and identify opportunities to improve efficiency and to determine potential eligibility for a rebate. All analyses receive a detailed report with specific recommendations to help develop an energy savings plan. Participants are also eligible for free direct install gas-saving measures including programmable thermostats, low-flow aerators and showerheads, pre-rinse spray valves and weather stripping for exterior doors.

Analyses available

Type of analysis	Cost	Value
Basic (for small businesses)	\$50	\$500
Comprehensive** (for mid-size businesses)	\$200	\$1,300
Custom*** (for larger operations)	Costs are determined on a project-by-project basis for this specialized, in-depth approach.	
Ad hoc services (for specific energy use analysis, such as steam trap surveys for heating system and infrared scans)	Costs are determined on a project-by-project basis.	

Note: The analysis does not include electric consumption, except as related to natural gas equipment, so it is not considered a comprehensive energy audit.

*Facilities served by multiple natural gas accounts in different rate classes will default to the category corresponding to the largest-consumption account.

**Traditional analysis for mid-size customers, serving the majority of participants

***Custom analysis provides for more comprehensive review and/or specialty technical analysis of primarily larger facilities, but is not to be considered an industrial or process efficiency audit or a recommissioning project.

Start saving today.

For more information on the Natural Gas Energy Analysis, call your account manager or our Business Customer Hotline at 612-321-4939 (877-809-3803). Or, visit us online at CenterPointEnergy.com/EnergyAnalysis.

Program deadlines

- Program dates are Jan. 1 – Dec. 31.
- Rebate applications must be postmarked by Dec. 31.

Natural gas — did you know?

Affordable. 

Natural gas costs substantially less to use than electricity, propane or heating oil.

Domestic. 

Ninety-eight percent of the natural gas used in the U.S. comes from North America.

Safe. 

Natural gas appliances have a great safety record and state-of-the-art equipment now has advanced capabilities, like auto shut-off.

Clean. 

As a primary fuel that can be used in its natural state rather than undergoing a pollution-producing, energy-wasting conversion process, natural gas leaves about half the carbon footprint of electricity.

Efficient. 

The natural gas distribution system is over 90 percent efficient from the well to the burner tip, compared to the electric grid, which is about 30 percent efficient from the power plant to the plug.

Comfortable. 

- Natural gas water heaters recover faster and have more hot water available than electric water heater models.
- Heat delivered from a natural gas furnace feels warmer as the air delivered is 25 F warmer than air from an electric heat pump.
