

Tree Trimming Safety Tips

- Keep yourself, tools and equipment at least 10 feet away from power lines
- Always look up to spot power lines in the area where you plan to trim/cut
- Avoid trimming and cutting branches that may fall and hit power lines or other electrical equipment
- When possible, carry long objects horizontally

If a project cannot be performed safely near a live power line, contact us in advance at 713-207-2222 or 713-945-6707 to discuss options for making the work site safe.
