 Vectren Corporation - Climate Change 2018

C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

Vectren Corporation is an energy holding company. Its wholly owned subsidiary, Vectren Utility Holdings, Inc., serves as the intermediate holding company for three operating utilities: Vectren Energy Delivery of Vectren Indiana–North (Vectren Indiana–North), Vectren Energy Delivery of Vectren Indiana–South (Vectren Indiana–South) and Vectren Energy Delivery of Ohio (Vectren Ohio).

Vectren Indiana–North provides energy delivery services to 592,400 natural gas customers located in central and southern Indiana. Vectren South provides energy delivery services to 145,200 electric customers and 111,500 gas customers located in southwestern Indiana. Vectren Indiana–South also owns and operates electric generation to serve its electric customers and optimizes those assets in the wholesale power market. Vectren Ohio provides energy delivery services to approximately 318,100 natural gas customers located in west central Ohio.

Vectren Corporation is based in Evansville, Indiana. Additional information can be found on the About Vectren page (http://www.vectren.com/corporate/about) on Vectren.com. Vectren solely operates in the United States of America. Vectren Corporation is an investor-owned corporation trading on the New York Stock Exchange under the symbol, VVC.

Our Board has embraced the importance of sustainability relative to value creation and promoting the interests of all of the Company’s stakeholders. Our efforts in this area have been most recently summarized in our 2017 corporate sustainability report, which includes data presented in the format prescribed by the Global Reporting Initiative. Those efforts include monitoring current and emerging political and social action, and public policy and environmental issues that may affect the business operations, material financial performance, public image of the Company. They also extend to considering policies for sustainable growth strategies to create value consistent with long-term preservation and enhancement of the Company’s financial, environmental, and social capital. At every meeting, the Board’s Corporate Responsibility and Sustainability (CRS) Committee receives detailed reports on corporate sustainability matters from Vice President of Environmental Affairs and Corporate Sustainability who is charged with responsibility for this. Our Board also receives periodic reports on this well. Through the CRS Committee, our directors oversee the Company’s compliance, customer satisfaction, safety and community efforts. The Company’s chief compliance officer has regular private sessions with the CRS Committee in v where he advise of any issues of concern, well frankly respond to questions and comments from CRS Committee members. At each of those meetings, the CRS Committee receives detailed reports on environmental matters pertaining to the Company’s businesses. The CRS Committee also v issues relating to customer satisfaction in regulated business, well safety issues pertaining to the public and colleagues. The CRS Committee is engaged in overseeing the Company’s efforts to assist broader group of our stakeholders through the Vectren Foundation, community sustainability initiative and the volunteer efforts of colleagues.

### C1.2a

**C1.2a** Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored.

The Board is ultimately responsible for risk oversight across the organization. That responsibility is shared by five standing committees comprised solely of non-employee directors which oversee financial, compensation, compliance, reputational and governance risks with specific responsibility for reviewing management’s risk oversight function delegated to the Board’s Audit and Risk Management Committees. Vectren’s CEO holds the combined position of Board chair, president and chief executive officer (CEO).

Our Board has embraced the importance of sustainability relative to value creation and promoting the interests of all of the Company’s stakeholders. Our efforts in this area have been most recently summarized in our 2017 corporate sustainability report, which includes data presented in the format prescribed by the Global Reporting Initiative. Those efforts include monitoring current and emerging political and social action, and public policy and environmental issues that may affect the business operations, material financial performance, or public image of the Company. They also extend to considering policies for sustainable growth strategies to create value consistent with long-term preservation and enhancement of the Company’s financial, environmental, and social capital. At every meeting, the Board’s Corporate Responsibility and Sustainability (CRS) Committee receives detailed reports on corporate sustainability matters from our Vice President of Environmental Affairs and Corporate Sustainability, who is charged with responsibility for this area. Our Board also receives periodic reports on this area as well.
The Corporate Responsibility and Sustainability (CRS) committee is primarily responsible for both ensuring the discharge of the Board’s duties relating to oversight of the Company’s sustainability initiatives, as well as monitoring the Company’s policies, practices and procedures designed to ensure compliance with governmental regulations. The Committee charter requires that the Vice President of Environmental Affairs and Corporate Sustainability provide a report as to the Company’s environmental compliance and sustainability strategies at each of the regular Committee meetings, and the Vice President of Environmental Affairs and Corporate Sustainability meets with the full Board on an as needed basis to discuss sustainability strategies, sustainability reporting and any issues that may arise throughout the year.

The CRS Committee’s responsibilities include the oversight of Company policies, practices, and procedures relating to:

- Sustainability including monitoring current and emerging political and social action, and public policy and environmental issues that may affect the business operations, material financial performance public image of the Company and also considering policies for sustainable growth strategies to create value consistent with long-term preservation and enhancement of the Company’ financial, environmental, and social capital;

- Business practices and legal compliance, including compliance by utility operations with applicable safety and reliability regulations;

- Public communications with key stakeholders, other than the financial community;

- Community relations, including charitable contributions and community affairs;

- Customer relations, including customer satisfaction and quality of customer service;

- Overseeing policies, practices, and procedures relating to employer practices and procedures, including the Company’ objective of being employer of choice, compliance with employment related laws, regulations and policies, and the Company’ Human Equity initiative (which is focused upon driving sustainable culture supportive of diverse and inclusive work environment where individual talents recognized, developed, and maximized);

- Environmental compliance and stewardship, including adherence to environmental laws and regulations; and

- The promotion of a culture of public and employee safety
In 2017 the Company established a Corporate Sustainability Disclosure Committee composed of management employees and overseen by the Company’s Chief Financial Officer whose purpose is to ensure accuracy and consistency of the Company's sustainability disclosures across all of the Company’s sustainability reporting platforms.

Along with the Corporate Sustainability Disclosure Committee the Company also has an enterprise Risk Management Committee in which our Company’s Chief Financial Officer is a committee member. The enterprise Risk Management Committee composed of senior level management, whose purpose is to ensure an enterprise-wide approach to managing risk and compliance. The primary responsibility of the Committee is to anticipate, identify, prioritize and proactively manage the Company’s material risks and report the results of the Committee’s activities to the Audit and Risk Management Committee of the Board.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?
Yes

C1.3a

(C1.3a) Provide further details on the incentives provided for the management of climate-related issues.

Who is entitled to benefit from these incentives?
Chief Executive Officer (CEO)

Types of incentives
Monetary reward

Activity incentivized
Efficiency target

Comment
Annual cash incentive plans are 100% tied directly to business unit performances which are based on value-driving business metrics. Our incentive program focuses on transparency with an emphasis on incentivizing performance. All employees receive annual cash incentive.
bonuses based on achievement of performance of metrics that are related to energy efficiency targets which relate to climate change issues, for example, offering rebates on high efficiency furnaces, smart/Wi-Fi thermostats and insulation for residential customers and appliance and custom rebates for small to mid-sized commercial customers.

Who is entitled to benefit from these incentives?
Chief Financial Officer (CFO)

<th>Frequency of monitoring</th>
<th>How far into the future are risks considered</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Six-monthly or more frequently</td>
<td>&gt;6 years</td>
<td>On a quarterly basis we perform an assessment of climate-related risks and goals progress with our Corporate Responsibility and Sustainability Committee and on a monthly basis climate-related risks are assessed during our enterprise Risk Management Committee. Our risk management process includes identification, analysis, and vetting of risk factors related to climate change through our risk assessment, SEC reporting process and our resource planning process. The 2017 Form 10-K included the impacts of extreme weather events and environmental laws and regulations as risks posing material impact on the company's operations. We use the Integrated Resource Planning process to forecast 20 years out on external pressures on company operations, including risks associated with climate change. We regularly perform legislative analysis at the state and federal levels to identify and prepare for potential impacts of legislative and regulatory actions.</td>
</tr>
</tbody>
</table>

C2.2b

(C2.2b) Provide further details on your organization's process(es) for identifying and assessing climate-related risks.

The Company is actively engaged in long-term strategic planning through initiative assessment, development and execution. The strategic planning process consistently engages the Company's Board of Directors and is updated as the Company's strategic environment changes. The result of that process is regularly communicated to all stakeholders. Further, the Company has a strong compliance and risk management program that promotes a culture of compliance. The Company is, however, subject to a variety of risks including execution on its strategies.

On a quarterly basis the Company performs an assessment of climate-related risks and goals progress with our Corporate Responsibility and Sustainability Committee.
Vectren defines substantive financial impact as a sudden change of the Company’s strategic environment changes, in which strategic planning process cannot be implemented to keep this sudden change under management control. The climate-related risks caused by a range of hazards are beyond management control, and therefore, there is an expense or fall in revenue arising due to the sudden change.

Therefore, to avoid this, the committee develops strategies that focus on environmental, social and governance facts that contribute to the long-term growth of the Company’s sustainable business model. The Company’s sustainability policies and procedures are designed to assure compliance with applicable laws and regulations.

The Company’s enterprise Risk Management Committee composed of senior level management whose purpose is to ensure an enterprise-wide approach to managing risk and compliance. The primary responsibility of the Committee is to anticipate, identify, prioritize and proactively manage the Company’s material risks and report the results of the Committee’s activities to the Audit and Risk Management Committee of the Board. Under this enterprise risk management approach, the Committee oversees and approves a comprehensive company-wide risk assessment every two years, including an assessment of which risks are significant and provides assistance to business unit managers with risk monitoring and the implementation of strategies to mitigate risk in their areas.

The enterprise Risk Management Committee meets on a monthly basis to assess climate-related risked. As a part of our risk management process the Company identifies, analyzes, and vets risk factors related to climate change through our risk assessment, SEC reporting process and our resource planning process. The 2017 Form 10-K included the impacts of extreme weather events and environmental laws and regulations as risks posing material impact on the company’s operations. Every three years we perform an Integrated Resource Planning process to forecast 20 years out on external pressures on company operations, including risks associated with climate change. We regularly perform legislative analysis at the state and federal levels to identify and prepare for potential impacts of legislative and regulatory actions.

**C2.2d**

(C2.2d) Describe your process(es) for managing climate-related risks and opportunities.

The Company’s Board of Directors oversees all aspects of the company’s businesses, including the regulatory and operating aspects. The Board’s Corporate Responsibility and Sustainability Committee are charged with reviewing and reporting to the Board on the Company’s environmental initiatives and compliance strategies. Also, the Company’s enterprise Risk Management Committee, comprised of senior level management, is primarily responsible to anticipate, identify, prioritize and proactively manage the Company’s material risks and report the results of the Committee’s activities quarterly to the Audit and Risk Management Committee of the Board. The Company also has a Corporate Enterprise Risk Management Department. This group, in conjunction with the aforementioned committees, is responsible for establishing and enforcing the Company’s risk policies, including evaluation of risk due to regulatory changes on climate change issues.

Under this enterprise risk management approach, the Committee oversees and approves a comprehensive company-wide risk assessment every two years, including an assessment of which risks are significant and provides assistance to business unit managers with risk monitoring and the implementation of strategies to mitigate risk in their areas. The Committee periodically reviews and reports the following to the Audit and Risk Management Committee of the Board, as well as the full Board; all material business risks, the processes, procedures and controls in place to manage material risks; and the overall effectiveness of the enterprise risk management process. The identification, monitoring and management of proposed or enacted legislation or regulation relating to climate change are provided primarily through the Company’s Corporate Environmental Department and business unit environmental management.
C2.3

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?

C2.3a

(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Risk 1</th>
</tr>
</thead>
</table>

Where in the value chain does the risk driver occur?
Direct operations

Risk type
Transition risk

Primary climate-related risk driver
Policy and legal: Increased pricing of GHG emissions

Type of financial impact driver
Technology: Costs to adopt/deploy new practices and processes

Company-specific description
Vectren has identified reducing our own emissions and compliance with environmental standards as a key component of a sustainable carbon strategy. Vectren incorporates scenarios into our integrated resource planning that model a price on carbon. The increased pricing on carbon is tied to our generation planning activities and how we resource plan for a less carbon intensive generation fleet that includes natural gas generation and sources of renewable energy such as solar and wind.

Time horizon
Long-term

Likelihood
About as likely as not

Magnitude of impact
Medium-high

Potential financial impact
Explanation of financial impact
Our base case modeling assumes carbon price modeling growing to around $20 per metric ton of carbon in 2035. Carbon emissions from Vectren in 2017 were 5,229,365 metric tones of CO2e.

Management method
Vectren has announced the retirement or exiting of 4 coal fired generation plants by 2024. The Vectren electric generation portfolio will transition to a diverse mixture of less carbon intensive natural gas fired generation and renewables.

Cost of management

Comment
The projects are currently in the state of development and regulatory approval.

Identifier
Risk 2

Where in the value chain does the risk driver occur?
Direct operations

Risk type
Physical risk

Primary climate-related risk driver
Chronic: Changes in precipitation patterns and extreme variability in weather patterns

Type of financial impact driver
Increased operating costs (e.g., inadequate water supply for hydroelectric plants or to cool nuclear and fossil fuel plants)

Company-specific description
Vectren has identified ensuring our infrastructure is resilient to a changing climate as a critical component of a sustainable carbon strategy. Changes in weather pattern resulting in more frequent and sever weather increase the risk of interruptions to service for Vectren customers. Modernizing and strengthening of the Vectren system infrastructure builds resilient service for our customers. Continued electric system reliability and safety, shorter electric power outages, faster electric outage identification, fewer estimated customer bills, quicker service and more information to improve customer control over energy use are all pieces of Vectren's plan to continue delivering reliable electric service to our 145,000 customers as part of our Smart Energy Future.

Time horizon
Long-term

Likelihood
More likely than not

Magnitude of impact
Medium-high

**Potential financial impact**

**Explanation of financial impact**

In 2017, Vectren sought and received approval to begin enhancing our electric system by investing approximately $450 million in new infrastructure. Encompassing more than 800 projects over the next seven years, Vectren’s energy grid modernization plan is an integral part in the company’s strategy to become a next generation energy company.

**Management method**

Vectren’s robust electric infrastructure improvement strategy will enhance reliability and modernize the electric grid that delivers power to southwestern Ind. These electric system improvements include upgrades to portions of Vectren’s substations as well as the transmission and distribution networks. This work will also prepare the grid to accept advanced technology, improving service to customers and providing them with access to better information about their energy use. Continued electric system reliability and safety, shorter electric power outages, faster electric outage identification, quicker service and more information to improve customer control over energy use are all pieces of Vectren’s plan to continue delivering reliable electric service to our 145,000 customers as part of our Smart Energy Future. In December 2017, Vectren began a year-long program to install smart meter technology to all electric customers. Smart meters will not only provide and improve system reliability and resiliency, they also enhance the customer experience by enabling quicker service, faster electric outage identification and more tools to manage energy use. Since 2008, Vectren gas modernization programs have included the replacement of bare steel and cast iron distribution pipelines as well as improvements to transmission and other gas systems assets. These efforts support the continued safe and reliable delivery of natural gas to customers in a changing climate.

**Cost of management**

**Comment**

In 2017, Vectren sought and received approval to begin enhancing our electric system by investing approximately $450 million in new infrastructure. Encompassing more than 800 projects over the next seven years, Vectren’s energy grid modernization plan is an integral part in the company’s strategy to become a next generation energy company. Since 2008, Vectren has invested approximately $581 million in the replacement of aged bare steel cast iron on the gas pipeline infrastructure in Indiana and Ohio. Vectren has also invested approximately $233 million on improvements to its gas transmission pipeline infrastructure since 2012, and $78 million on improvements to its gas system modernization infrastructure programs in Indiana and Ohio. Vectren’s total investment in gas infrastructure modernization programs in Indiana and Ohio is approximately $892 million.

**Identifier**

Risk 3

**Where in the value chain does the risk driver occur?**

Direct operations
Risk type
Physical risk

Primary climate-related risk driver
Acute: Increased severity of extreme weather events such as cyclones and floods

Type of financial impact driver
Other, please specify (Increased operating costs - safety)

Company-specific description
A critical component of a sustainable strategy is worker safety. Vectren has identified increasing severe weather extremes as a safety issue for our workers. Our workforce is working in extreme weather scenarios to maintain electric and natural gas deliveries in a reliable and safe manner during extreme weather. These conditions vary in Indiana and Ohio from extreme heat in the summer, blizzard and ice events in the winter, and storms and flooding throughout the year. We take this risk seriously and worker safety is a top priority.

Time horizon
Current

Likelihood
Very likely

Magnitude of impact
High

Potential financial impact

Explanation of financial impact

Management method
Vectren's continued investments in electric system reliability and safety result in shorter electric power outages, faster electric outage identification, quicker service. Vectren's Safety Management System (SMS) is a framework of goals, objectives, processes and procedures. It enables us to execute strategies using risk management, established controls, assessment and continuous improvement to meet safety and business objectives. It is built on processes providing more discipline in the use of data and other information for better decision making. Our SMS objectives strengthen and broaden Vectren's safety culture. Our overall safety performance will improve by making risk-reducing decisions. In December 2017, Vectren began a year-long program to install smart meter technology to all electric customers. Smart meters will not only provide and improve system reliability and resiliency, they also enhance the customer experience by enabling quicker service, faster electric outage identification and more tools to manage energy use. Since 2008, Vectren gas modernization programs have included the replacement of bare steel and cast iron distribution pipelines as well as improvements to transmission and other gas systems assets. These efforts support the continued safe and reliable delivery of natural gas to customers in a changing climate.

**Company-specific description**
Vectren has identified opportunities to offer services through a fully owned subsidiary Energy Systems Group (ESG). Through its core business of energy performance contracting, ESG provides comprehensive design-build construction solutions for the installation of new energy efficient building systems, where guaranteed savings from operation budgets are used to finance the capital improvements. From the initial energy audit through long-term measurement and verification of project savings, ESG designs and implements infrastructure modernization solutions that fit the needs of a particular facility, including energy efficiency, renewable energy, distributed generation, water conservation and sustainable materials and operations.

Increased production capacity, resulting in increased revenues

Company-specific description
Energy efficiency (EE) has generally been accepted as a critical function of utilities to mitigate climate change, delay the need to build new generation, save customers money on their utility bills and improve customer satisfaction. Vectren's commitment to EE programs continues to achieve significant energy savings. Vectren's gas and electric EE programs encourage customers to manage their energy use through a variety of approaches including: residential and business audits which help customers identify energy savings opportunities; in-store lighting discounts which apply utility-sponsored rebates at the time of purchase; appliance recycling which encourages customers to remove their inefficient refrigerators and freezers; rebates on equipment and services which reduce the initial higher costs for efficient products; home energy reports that utilize behavioral science to influence energy usage; and commercial equipment upgrades and maintenance. Vectren continues to offer integrated EE programs, meaning that its electric and natural gas programs are jointly delivered to best penetrate customer markets. With combined efforts, the same home or business may be given deeper savings in the same retrofit rather than having to participate in separate programs. Vectren's DR program, referred to as Summer Cycler, is a voluntary energy management program which uses direct load control (DLC) switches to briefly cycle air conditioning and water heating units in customer homes during periods of peak electricity demand. Summer Cycler participants earn $5 monthly bill credits during the cooling season of June through September. By cycling off major electric appliances for short periods of time,
peak power demand can be trimmed with little or no customer discomfort or inconvenience. With changes in technology, there are many opportunities for Vectren to position itself to provide customers with actionable steps for better managing their energy usage and costs. Vectren's EE and DR programs are expanding by integrating smart/Wi-Fi thermostats into the program mix. In 2018, Vectren's Income Qualified Weatherization and Multi-Family Programs will begin installing Nest thermostats in homes to help improve efficiency, in lieu of programmable thermostats.

**Time horizon**
Current

**Likelihood**
 Virtually certain

**Magnitude of impact**
High

**Potential financial impact**

**Explanation of financial impact**
In 2017, the Vectren EE portfolio achieved more than 44,000 MWh electric savings and approximately 4.4 million therms for measures implemented or installed in that year. Most of these measures will continue to reap savings for many years to come. Since their inception in 2010, Vectren's electric EE programs have saved enough energy to power over 115,000 homes. Vectren’s natural gas EE programs have saved enough energy to heat over 250,000 homes since their inception in 2006. In 2017, the residential electric programs achieved over 24 million kWh of savings and the natural gas residential programs achieved approximately 3.5 million therms of savings. The Commercial electric programs achieved 20 million kWh of savings and the natural gas business programs achieved an estimated 883 thousand therms of savings. As of 2017, about 23,000 residential customers have switches installed. Today, our DLC program is able to curtail 19.2 MW in peak demand savings during times of high use.

**Strategy to realize opportunity**
These programs are current and ongoing. As the market shifts towards all things smart, Vectren will also launch a “Smart Cycle” initiative. Smart Cycle encompasses various avenues for customers to participate in EE and DR related smart thermostats programs. This initiative includes the 2,000 smart thermostat units which were installed in eligible homes in 2016. Beginning in 2018, Vectren will offer two additional ways to engage customers in this initiative. 1,000 direct load control (DLC) Summer Cycler Switches will be changed out for Nest Thermostats in 2018. These thermostats provide two-way communication and serve as a strategic option for cost effective load control solutions. As an alternative to the older DLC switches, the thermostats provides customers more control over their energy use through optimization of heating and cooling of a home. Over the next decade, Vectren plans to replace all DLC switches with smart thermostats. The Bring Your Own Thermostat Program, also planned to kick off in 2018, allows customers who have their own Smart/Wi-Fi enabled device from multiple potential vendors to participate in DR and other load curtailing programs managed through the utility. Empowering and engaging the customer can significantly improve participation and satisfaction with the program.

Company-specific description
In future natural gas contracts, Vectren is advocating an approach for suppliers to be responsible providers committed to making an effort to reduce methane emissions across the natural gas value chain. Vectren supports the the Guiding Principles on Reducing Methane Emissions across the Natural Gas Value Chain developed in conjunction with the The Oil & Gas Methane Partnership of the Climate and Clean Air Coalition. Vectren is taking an active part with the Edison Electric Institute and the American Gas Association to support the Natural Gas Sustainability Initiative to work on advancing methane disclosure and sustainability practices across the value chain of natural gas.

Time horizon

Potential financial impact

Explanation of financial impact

Strategy to realize opportunity
Vectren will stay engaged in current industry sustainability activities related to the value chain of natural gas from wellhead to burner tip as these initiatives progress. This will allow us to have input and the most up to date information on methane reduction principles for future gas contracts.

Please select

C3.1c

(C3.1c) Explain how climate-related issues are integrated into your business objectives and strategy.

Carbon strategy is a cornerstone in Vectren's corporate planning process. Vectren regularly assesses the risks and opportunities associated with carbon as part of our overall strategic business planning and enterprise risk management processes. Under Vectren’s smart energy future transition plan the Company has identified three critical components of a sustainable carbon strategy:
1. Reducing our own emissions and compliance with environmental standards.
2. Ensuring our infrastructure is resilient to changing climate.
3. Helping our customers reduce their emissions.

In 2016, Vectren completed an extensive year-long integrated resource planning process, which considered a broad range of potential resources and variables to ensure the plan offered a long-term reliable and reasonably priced generation portfolio as well as a balanced energy mix. In arriving at a preferred generation portfolio we considered the costs to continue operating our existing coal-fired generation units in a manner that complies with current and anticipated future environmental requirements, as well as various resource alternatives, such as the use of energy efficiency programs and renewable resources as part of the overall generation portfolio. The Company received robust stakeholder participation and feedback, holding three public stakeholder meetings. Vectren's generation transition plan was presented to the public in November 2016 and includes the retirement of A.B. Brown Units 1 & 2, F.B. Culley Unit 2 and exiting joint operations of Warrick Unit 4 with Alcoa, the construction of a new natural gas-fired combined cycle unit and the addition of 54 megawatts of solar by 2025.
Vectren has a long-standing commitment to environmental performance. Since the 1990’s, Vectren’s coal-fired generation fleet has shown a steady reduction of sulfur dioxide, nitrogen oxide, mercury and particulate emissions through its investments in scrubbers, selective catalytic reduction technology and fabric filters. In addition to reductions of these traditional pollutants, the Company has reduced its emissions of carbon by 35% below 2005 levels (on a tonnage basis) through the retirement of F.B. Culley 1, expiration of municipal contracts, successful execution of electric conservation programs, the addition of renewable generation and the installation of more efficient dense pack turbine technology.

But our commitment to carbon emission reductions does not stop there. Once approved and with the successful execution of Vectren’s electric generation transition plan, Vectren will achieve its goal of 60% reduction of carbon emissions below 2005 levels by 2024. Moreover, the carbon intensity of Vectren’s generation fleet will drop from 1,950 lbs CO2/MMBtu to 980 lbs CO2/MMBtu, well below the intensity targets set in EPA’s Clean Power Plan. While it is still unclear as to the short-term future of any carbon regulation, Vectren’s smart energy future transition plan will position the Company to successfully comply long-term with carbon reduction requirements.

<table>
<thead>
<tr>
<th>Climate-related scenarios</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>IEA 450</td>
<td>With its smart energy future transition plan, Vectren is taking action to reduce its own carbon emissions consistent with the international community’s goal of preventing global temperatures from rising more than two degrees Celsius by the year 2100. Using guidance from the Intergovernmental Panel on Climate Change (IPCC) and the International Energy Agency’s 450 parts per million (ppm) scenario, the Company assumes a 50% carbon emission reduction from 2005 levels by 2050 would be required to align with the IPCC goal. Vectren’s actions being taken today as part of our electric generation transition plan will exceed the IPCC emission reduction targets meant to limit global temperature increases to two degrees Celsius by 2100.</td>

<td>Today Vectren owns and operates approximately 1,000 megawatts of coal-fired generation, 245 megawatts of natural gas-fired peaking units and a 3-megawatt landfill gas-to-electricity facility. The Company also has 80 megawatts of wind power through two long-term purchase agreements and 32 megawatts of coal generation through its ownership in the Ohio Valley Electric Corporation. This portfolio, dependent largely on coal, is about to change dramatically. On February 20, 2018, Vectren filed a request with the Indiana Utility Regulatory Commission seeking authority to implement changes to its generation portfolio. These proposed changes would transition our electric generation portfolio from nearly total reliance on baseload coal to a fully diversified and balanced portfolio of fuels, including coal, natural gas and renewables. If authorized by the Indiana Utility Regulatory Commission, Vectren would then seek approval from the Commission for the implementation of the proposed changes.</td>

**Comment**
Not only is Vectren upgrading its electric system, but we are also continuing our path toward
a balanced energy mix with universal solar projects. Vectren will partner with First Solar, Inc.
to build a 50-megawatts (MW) solar array that will be situated on approximately 300 acres
and will consist of about 150,000 solar panels. The array will be mounted on a single-axis
tracking system, which enables the panels to automatically pivot to enhance energy
generation as the sun's rays move across the surface of the Earth. The facility, which should
be operational in the fall of 2020, is expected to generate enough power to meet the needs of
more than 11,000 households per year. The project will provide up to 250 jobs at its peak,
many of which will be union labor. Construction will begin after the Indiana Utility Regulatory
Commission authorizes the project; a decision is expected in the first half of 2019. (2) 2MW
projects that will be buildt in 2018 combined will supply enough renewable energy to power
600 homes each year.

Comment
Vectren actively monitors the consumption of energy, water and fuel to evaluate issues as they arise while simultaneously developing and implementing energy efficient plans. All new utility, corporate and remodeled buildings are designed to meet ENERGY STAR® standards and with the minimization of energy use in mind. Through the implementation of new, relevant fleet vehicle technology, Vectren continuously works towards building a more sustainable fleet with lower overall fuel consumption. In 2017, Vectren made the following improvements to our facilities: • Replaced the variable speed drives on the HVAC units at our NP Wagner & SSC complexes to provide better control • Replaced the boilers at the NP Wagner complex which can result in a 760 ton reduction in annual carbon output (Calculations provided by Johnson Controls per the estimated reduction in natural gas usage) • Replaced numerous older model heaters throughout Vectren’s field office garages • Installed window tinting throughout various areas of the NP Wagner complex to reduce heat from sunlight In 2017, the following efficiency upgrades were made to Vectren’s vehicle fleet: • Purchased 1 plug-in, hybrid electric bucket truck • Purchased 1 plug-in, electric fork lift • Replaced 24 light-duty vehicles with E85-complaint vehicles • Replaced 30 medium-duty vehicles with E85-complaint vehicles • Overall, fuel economy increased by ~0.86%

Vectren’s gas and electric energy efficiency (EE) programs encourage customers to manage their energy use through a variety of approaches including: residential and business audits which help customers identify energy savings opportunities; in-store lighting discounts which apply utility-sponsored rebates at the time of purchase; appliance recycling which encourages customers to remove their inefficient refrigerators and freezers; rebates on equipment and services which reduce the initial higher costs for efficient products; home energy reports that utilize behavioral science to influence energy usage; and commercial equipment upgrades and maintenance. In 2017, the Vectren EE portfolio achieved more than 44,000 MWh electric savings and approximately 4.4 million therms for measures implemented or installed in that year.

Vectren’s – Next Generation Sustainability – which reflects the evolving direction that Vectren is taking as it transitions its electric generation portfolio from nearly total reliance on baseload coal to a fully diversified and balanced energy mix that, along with our grid modernization plan, we believe will ensure Vectren meets its long term electric supply needs in a safe and reliable manner while dramatically lowering our carbon emissions. Our plan for a diversified generation portfolio is the result of a comprehensive integrated resource planning process, which included multiple opportunities for stakeholder input, and provides for the retirement of three aging coal-fired units and exit of a fourth, replacement of those units with new highly-efficient natural gas-fired generation and investment in utility solar projects commencing as early as 2018. Our new generation portfolio is expected to reduce Vectren’s emissions of carbon 60% from 2005 levels, well below the emission targets called for in international accords, as well as provide for significant reductions of other air emissions and wastewater.

Vectren is executing an integrated, multi-year business transformation initiative focused on the technologies, which allow us to provide excellent customer experience as well as improved strategic operations. Program ExCEL (Excellent Customer Experience Lifecycle) includes enhancements to technology systems and processes associated with electric and natural gas metering as well as customer care and billing systems. In order to support the energy grid infrastructure improvements, the strategic operations enhancements include technology added to the electric distribution system to help manage electric outage information and customer data. When fully deployed, these systems will help pinpoint causes and locations of system interference, allowing field crews to respond faster and provide better restoration times to those impacted customers. In 2017 Vectren released its future electric grid modernization plan, another significant step toward Next Generation Sustainability. Vectren’s multi-year grid modernization plan consists of over 800 infrastructure projects through 2024 and joins its existing gas infrastructure investment plan to ensure Vectren continues to provide safe, reliable, service that meets the needs of its customers. Vectren also installed smart meter readings for our residential gas and electric customers.

Comment
As evidence of its commitment to long-term energy efficiency, in 2017, Vectren Indiana–South completed implementation of its Conservation Voltage Reduction (CVR) program. The CVR technology was deployed on the Buckwood Substation in 2017, with the plan for another substation to follow in 2020. The CVR program is an energy savings and demand response (DR) program that achieves conservation through automated monitoring and control of voltage levels provided on distribution circuits. With the CVR, the utility systematically reduces voltages in its distribution network, resulting in a proportional reduction of load on the network. Consumers receive a lower but still acceptable voltage and use less energy to accomplish the same tasks. End use customers realize lower energy and demand consumption when CVR is applied to the distribution circuit from which they are served. The CVR strategy can provide benefits for emergency load relief, sub-station voltage reduction, peak load management and customer end-use efficiency.

Comment
Electricity, regardless of how it is generated, can be a substitute for fossil fuel-fired technologies in numerous end-use applications throughout the economy that will enable a third party user to reduce its GHG emissions.

C-EU4.6

(C-EU4.6) Describe your organization’s efforts to reduce methane emissions from your electricity generation activities.

C-OG4.6

(C-OG4.6) Describe your organization’s efforts to reduce methane emissions from oil and gas production activities.

C-OG4.7

(C-OG4.7) Does your organization conduct leak detection and repair (LDAR) or use other methods to find and fix fugitive methane emissions from oil and gas production activities? Please select

C-OG4.8

(C-OG4.8) If flaring is relevant to your oil and gas production activities, describe your organization’s efforts to reduce flaring, including any flaring reduction targets.

C5. Emissions methodology
C5.1

(C5.1) Provide your base year and base year emissions (Scopes 1 and 2).

Scope 1

Base year start
January 1 2005

Base year end
December 31 2005

Base year emissions (metric tons CO2e)
7459612

Comment

Scope 2 (location-based)

Base year start
January 1 2017

Base year end
December 31 2017

Base year emissions (metric tons CO2e)
21432.1

Comment
Scope 2 includes electricity usage at Vectren owned buildings and our headquarters.

Scope 2 (market-based)

Base year start

Base year end

Base year emissions (metric tons CO2e)

Comment

(C6.3) What were your organization’s gross global Scope 2 emissions in metric tons CO2e?

Row 1

Scope 2, location-based
21432.1

Scope 2, market-based (if applicable)
<Field Hidden>

End-year of reporting period
<Field Hidden>

Comment
Vectren and its operations are solely based in the United States. Scope 2 includes electricity usage at Vectren owned buildings and our headquarters.

Row 2

Scope 2, location-based
<Field Hidden>

Scope 2, market-based (if applicable)
C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?
No

C6.5
(C6.5) Account for your organization's Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**
0

**Emissions calculation methodology**
N/A

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**
These Scope 3 emissions are an insignificant percentage (de minimis) of our company's carbon emissions footprint. Vectren concluded this based on the guidance provided in Chapter 5 of the Greenhouse Gas Protocol's Corporate Value Chain (Scope 3) Accounting and Reporting Standard. The CDP Guidelines specifically refer electric utilities to the section of this document on Fuel-an-Energy-Related Emissions not included in Scope 1 or 2 for guidance on which emissions should be reported under Scope 3.

Capital goods

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**
0

**Emissions calculation methodology**
N/A

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**
These Scope 3 emissions are an insignificant percentage (de minimis) of our company's carbon emissions footprint. Vectren concluded this based on the guidance provided in Chapter 5 of the Greenhouse Gas Protocol's Corporate Value Chain (Scope 3) Accounting and Reporting Standard. The CDP Guidelines specifically refer electric utilities to the section of this document on Fuel-an-Energy-Related Emissions not included in Scope 1 or 2 for guidance on which emissions should be reported under Scope 3.

Fuel-and-energy-related activities (not included in Scope 1 or 2)
Evaluation status
Relevant, not yet calculated

Metric tonnes CO2e
0

Emissions calculation methodology
N/A

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
This source category is related to the extraction, processing, and transportation of the various fuels Vectren uses for the production of electricity. Vectren does not currently attempt to estimate the Scope 3 emissions that are associated with this source category, nor does it currently have a sense of the magnitude of the emissions associated with the source category. The emissions associated with this source category are believed to be predominately carbon dioxide and methane. Vectren participates in the Natural Gas Sustainability Initiative which is working for consistent disclosure of carbon emissions across the value chain of natural gas form wellhead to burner tip. As Vectren transitions to natural gas fired generation, we gather more information on these emission sources.

Upstream transportation and distribution

Evaluation status
Relevant, not yet calculated

Metric tonnes CO2e
0

Emissions calculation methodology
N/A

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
Vectren determined this to be relevant and is included in the fuel and energy activities category which Vectren has determined to be relevant, but has yet to estimate

Waste generated in operations

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
0
Emissions calculation methodology
N/A

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
Vectren concluded this based on the guidance provided in Chapter 5 of the Greenhouse Gas Protocol's Corporate Value Chain (Scope 3) Accounting and Reporting Standard. The CDP Guidelines specifically refer electric utilities to the section of this document on Fuel-an-Energy-Related Emissions not included in Scope 1 or 2 for guidance on which emissions should be reported under Scope 3. Vectren has extensive programs for handling of hazardous and non-hazardous waste as well as recycling programs. While carbon emission offsets are not calculated, Vectren recycled 767,815,920 pounds of waste in 2017.

Business travel

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
0

Emissions calculation methodology
N/A

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
These Scope 3 emissions are an insignificant percentage of our company’s carbon emissions footprint. Vectren has estimated these emissions to be below the threshold of de minimis in comparison to our Scope 1 emissions.

Employee commuting

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
0

Emissions calculation methodology
N/A

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0
Explanation
These Scope 3 emissions are an insignificant percentage (de minimis) of our company's carbon emissions footprint. Vectren concluded this based on the guidance provided in Chapter 5 of the Greenhouse Gas Protocol's Corporate Value Chain (Scope 3) Accounting and Reporting Standard. The CDP Guidelines specifically refer electric utilities to the section of this document on Fuel-an-Energy-Related Emissions not included in Scope 1 or 2 for guidance on which emissions should be reported under Scope 3.

Upstream leased assets

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
0

Emissions calculation methodology
N/A

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
Vectren does not have upstream leased assets.

Downstream transportation and distribution

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
0

Emissions calculation methodology
N/A

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
These Scope 3 emissions are an insignificant percentage (de minimis) of our company's carbon emissions footprint. Vectren concluded this based on the guidance provided in Chapter 5 of the Greenhouse Gas Protocol's Corporate Value Chain (Scope 3) Accounting and Reporting Standard. The CDP Guidelines specifically refer electric utilities to the section of this document on Fuel-an-Energy-Related Emissions not included in Scope 1 or 2 for guidance on which emissions should be reported under Scope 3.

Processing of sold products
Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
0

Emissions calculation methodology
N/A

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
Vectren concluded this based on the guidance provided in Chapter 5 of the Greenhouse Gas Protocol's Corporate Value Chain (Scope 3) Accounting and Reporting Standard. The CDP Guidelines specifically refer electric utilities to the section of this document on Fuel-an-Energy-Related Emissions not included in Scope 1 or 2 for guidance on which emissions should be reported under Scope 3.

Use of sold products

Evaluation status
Not relevant, calculated

Metric tonnes CO2e
0

Emissions calculation methodology
N/A

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
Vectren concluded this based on the guidance provided in Chapter 5 of the Greenhouse Gas Protocol's Corporate Value Chain (Scope 3) Accounting and Reporting Standard. The CDP Guidelines specifically refer electric utilities to the section of this document on Fuel-an-Energy-Related Emissions not included in Scope 1 or 2 for guidance on which emissions should be reported under Scope 3.

End of life treatment of sold products

Emissions calculation methodology
Percentage of emissions calculated using data obtained from suppliers or value chain partners
Explanation

Other (downstream)

Evaluation status
Not relevant, calculated

Metric tonnes CO2e
7543797.5

Emissions calculation methodology
Based on US EPA Greenhouse Gas Reporting Program December 11, 2014 Final Rule (79 FR 73750 December 11, 2014) global warming potential for methane applied to the total amount of natural gas supplied by Vectren to downstream customers per EIA Form 176 to calculate the potential for emissions from customer owned asset combustion activities such as the use of gas furnaces and water heaters. Large customers that report their own emissions under the US EPA Mandatory Greenhouse Reporting Rule were not included in these Scope 3 calculations.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
The CDP Guidelines specifically refer electric utilities to the section of this document on Fuel-and Energy-Related Emissions not included in Scope 1 or 2 for guidance on which emissions should be reported under Scope 3. This emission source is not relevant to the
value chain and emissions output of Vectren. Vectren does report these Scope 3 indirect emissions on behalf of their customers under the EPA Mandatory Greenhouse Gas Reporting Rule Subpart NN. None of these emissions are considered Scope 1 as they are not direct emissions from a company owned asset.

C6.7

(C6.7) Are carbon dioxide emissions from biologically sequestered carbon relevant to your organization?

No

C6.10

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

**C7.9b**

*(C7.9b) Are your emissions performance calculations in C7.9 and C7.9a based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?*

Location-based

**C8. Energy**

C8.1

(C8.1) What percentage of your total operational spend in the reporting year was on energy?
More than 45% but less than or equal to 50%

C8.2

(C8.2) Select which energy-related activities your organization has undertaken.

<table>
<thead>
<tr>
<th>Activity</th>
<th>Indicate whether your organization undertakes this energy-related activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consumption of fuel (excluding feedstocks)</td>
<td>Yes</td>
</tr>
<tr>
<td>Consumption of purchased or acquired electricity</td>
<td>Yes</td>
</tr>
<tr>
<td>Consumption of purchased or acquired heat</td>
<td>No</td>
</tr>
<tr>
<td>Consumption of purchased or acquired steam</td>
<td>No</td>
</tr>
<tr>
<td>Consumption of purchased or acquired cooling</td>
<td>No</td>
</tr>
<tr>
<td>Generation of electricity, heat, steam, or cooling</td>
<td>Yes</td>
</tr>
</tbody>
</table>

C8.2a

(C8.2a) Report your organization’s energy consumption totals (excluding feedstocks) in MWh.

<table>
<thead>
<tr>
<th>Activity</th>
<th>Heating value</th>
<th>MWh from renewable sources</th>
<th>MWh from non-renewable sources</th>
<th>Total MWh</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consumption of fuel (excluding feedstock)</td>
<td>HHV (higher heating value)</td>
<td>11670</td>
<td>27426</td>
<td>39096</td>
</tr>
<tr>
<td>Consumption of purchased or acquired electricity</td>
<td>&lt;Field Hidden&gt;</td>
<td>220685</td>
<td>4380008</td>
<td>4600693</td>
</tr>
<tr>
<td>Consumption of purchased or acquired heat</td>
<td>&lt;Field Hidden&gt;</td>
<td>&lt;Field Hidden&gt;</td>
<td>&lt;Field Hidden&gt;</td>
<td>&lt;Field Hidden&gt;</td>

</tbody>
</table>

**C8.2b**

**(C8.2b) Select the applications of your organization’s consumption of fuel.**

<table>
<thead>
<tr>
<th>Application</th>
<th>Indicate whether your organization undertakes this fuel application</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consumption of fuel for the generation of electricity</td>
<td>Yes</td>
</tr>
<tr>
<td>Consumption of fuel for the generation of steam</td>
<td>No</td>
</tr>
<tr>
<td>Consumption of fuel for the generation of cooling</td>
<td>No</td>
</tr>
<tr>
<td>Consumption of fuel for co-generation or tri-generation</td>
<td>No</td>
</tr>
</tbody>
</table>

**C8.2c**

**(C8.2c) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.**

**Fuels (excluding feedstocks)**
- Coal

**Heating value**
- HHV (higher heating value)

**Total fuel MWh consumed by the organization**
- 458755

**MWh fuel consumed for the self-generation of electricity**
- 458755

**MWh fuel consumed for self-generation of heat**
- 0

**MWh fuel consumed for self-generation of steam**
- <Field Hidden>

**MWh fuel consumed for self-generation of cooling**
- <Field Hidden>
MWh fuel consumed for self-cogeneration or self-trigeneration
<Field Hidden>

(C9.1) Provide any additional climate-related metrics relevant to your business.

C-EU9.5a

(C-EU9.5a) Break down, by source, your total planned CAPEX in your current CAPEX plan for power generation.

<table>
<thead>
<tr>
<th>Primary power generation source</th>
<th>CAPEX planned for power generation from this source</th>
<th>Percentage of total CAPEX planned for power generation</th>
<th>End year of CAPEX plan</th>
<th>Comment</th>
</tr>
</thead>
</table>

C-EU9.5b

(C-EU9.5b) Break down your total planned CAPEX in your current CAPEX plan for products and services (e.g. smart grids, digitalization, etc.).

<table>
<thead>
<tr>
<th>Products and services</th>
<th>Description of product/service</th>
<th>CAPEX planned for product/service</th>
<th>Percentage of total CAPEX planned products and services</th>
<th>End of year CAPEX plan</th>
</tr>
</thead>
</table>

C-CO9.6/C-EU9.6/C-OG9.6

(C-CO9.6/C-EU9.6/C-OG9.6) Disclose your investments in low-carbon research and development (R&D), equipment, products, and services.

C-OG9.7

(C-OG9.7) Disclose the breakeven price (US$/BOE) required for cash neutrality during the reporting year, i.e. where cash flow from operations covers CAPEX and dividends paid/ share buybacks.
C10. Verification

C10.1

(C10.1) Indicate the verification/assurance status that applies to your reported emissions.

<table>
<thead>
<tr>
<th>Scope</th>
<th>Verification/assurance status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scope 1</td>
<td>No third-party verification or assurance</td>
</tr>
<tr>
<td>Scope 2 (location-based or market-based)</td>
<td>No third-party verification or assurance</td>
</tr>
<tr>
<td>Scope 3</td>
<td>No emissions data provided</td>
</tr>
</tbody>
</table>

C10.2

(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?

No, but we are actively considering verifying within the next two years

C11. Carbon pricing

C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

No, and we do not anticipate being regulated in the next three years

C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?

No
C11.3

(C11.3) Does your organization use an internal price on carbon?
Yes

C11.3a

(C11.3a) Provide details of how your organization uses an internal price on carbon.

Objective for implementing an internal carbon price
- Navigate GHG regulations
- Stakeholder expectations
- Drive energy efficiency
- Drive low-carbon investment
- Identify and seize low-carbon opportunities

GHG Scope
- Scope 1

Application
Vectren performs an extensive year-long integrated resource planning (IRP) process, which consider a broad range of potential resources and variables to ensure the plan offered a long-term reliable and reasonably priced generation portfolio as well as a balanced energy mix. Vectren performed scenario analysis around the impacts of carbon pricing as part of this effort. In arriving at a preferred generation portfolio we considered the costs to continue operating our existing coal-fired generation units in a manner that complies with current and anticipated future environmental requirements including carbon markets and constraints on emissions related to fossil fuel combustion, as well as various resource alternatives, such as the use of energy efficiency programs and renewable resources as part of the overall generation portfolio.

Actual price(s) used (Currency /metric ton)
- 20

Variance of price(s) used
A base case with carbon pricing ranging from $0-$20 was used with pricing forecasts ending in 2036. Multiple scenarios were run with their own carbon pricing assumptions and ranges. The carbon price forecast used in Vectren's 2016 IRP is based on the delayed implementation of the Clean Power Plan assuming that most states opt into national mass-based trading. It is assumed that California continues to meet its own carbon goals that are more stringent than the Clean Power Plan and that the RGGI states conform to meeting Clean Power Plan requirements rather than stricter regional reduction requirements.
**Type of internal carbon price**
Shadow price

**Impact & implication**
Vectren received robust stakeholder participation and feedback, holding three public stakeholder meetings during our IRP process. The result of the IRP scenario modeling resulted in the development of a generation transition plan to a less carbon intensive energy portfolio. Vectren’s generation transition plan was presented to the public in November 2016 and includes the retirement of A.B. Brown Units 1 & 2, F.B. Culley Unit 2 and exiting joint operations of Warrick Unit 4 with Alcoa, the construction of a new natural gas-fired combined cycle unit and the addition of 54 megawatts of solar by 2025. On February 20, 2018, Vectren filed a request with the Indiana Utility Regulatory Commission seeking authority to implement changes to its generation portfolio. These proposed changes would transition our electric generation portfolio from nearly total reliance on baseload coal to a fully diversified and balanced portfolio of fuels, including coal, natural gas and renewables. Once approved and with the successful execution of Vectren’s electric generation transition plan, Vectren will achieve its goal of 60% reduction of carbon emissions below 2005 levels by 2024. Moreover, the carbon intensity of Vectren’s generation fleet will drop from 1,950 lbs CO2/MMBtu to 980 lbs CO2/MMBtu, well below the intensity targets set in EPA’s Clean Power Plan. While it is still unclear as to the short-term future of any carbon regulation, Vectren’s smart energy future transition plan will position the Company to successfully comply long-term with carbon reduction requirements.

80

% Scope 3 emissions as reported in C6.5
0

Rationale for the coverage of your engagement
Vectren is actively involved in supply chain management and vendor management to ensure Vectren is properly prepared to manage potential regulations and adapt to an ever changing operating environment. Involving supply chain at the beginning of the supplier selection ensures that Vectren key corporate strategies and initiatives are considered in all aspects of the purchasing process. Vectren key corporate strategies include: Implementing a comprehensive corporate carbon policy and strategy which includes an optimal utility compliance plan and strategy for engaging state and regional decision makers and identifies energy conservation opportunities for corporate facilities and fleet. The modernization of our gas transmission and distribution systems by investing in projects that meet customer needs, enhance safety and reliability, reduce risk or comply with regulatory mandates. Execute the plan to diversify our electric generation fleet with a focus on reliable, reasonably priced energy.

Impact of engagement, including measures of success
KPIs are currently under development to tie supply chain initiatives to corporate sustainability metrics to be published in a corporate sustainability score card to further expand and grow the program.

Comment
KPIs are currently under development to tie supply chain initiatives to corporate sustainability metrics to be published in a corporate sustainability score card to further expand and grow the program.

Please explain the rationale for selecting this group of customers and scope of engagement
Energy efficiency (EE) has generally been accepted as a critical function of utilities to mitigate climate change, delay the need to build new generation, save customers money on their utility bills and improve customer satisfaction. Vectren’s commitment to EE programs continues to achieve significant energy savings. Vectren’s gas and electric EE programs encourage customers to manage their energy use through a variety of approaches including: residential and business audits which help customers identify energy savings opportunities; in-store lighting discounts which apply utility-sponsored rebates at the time of purchase; appliance recycling which encourages customers to remove their inefficient refrigerators and freezers; rebates on equipment and services which reduce the initial higher costs for efficient products; home energy reports that utilize behavioral science to influence energy usage; and commercial equipment upgrades and maintenance.

Impact of engagement, including measures of success
In 2017, the Vectren EE portfolio achieved more than 44,000 MWh electric savings and approximately 4.4 million therms for measures implemented or installed in that year. Most of these measures will continue to reap savings for many years to come. Since their inception in 2010, Vectren’s electric EE programs have saved enough energy to power over 115,000 homes. Vectren’s natural gas EE programs have saved enough energy to heat over 250,000 homes since their inception in 2006. Vectren’s EE programs are generally separated into two groups: residential and commercial. In 2017, the residential electric programs achieved over 24 million kWh of savings and the natural gas residential programs achieved approximately 3.5 million therms of savings. The Commercial electric programs achieved 20 million kWh of savings and the natural gas business programs achieved an estimated 883 thousand therms of savings.

(C12.1c) Give details of your climate-related engagement strategy with other partners in the value chain.
Vectren is actively involved in supply chain management and vendor management to ensure Vectren is properly prepared to manage potential regulations and adapt to an ever changing operating environment. Involving supply chain at the beginning of the supplier selection process ensures that Vectren’s corporate strategies and initiatives are considered in all aspects of the purchasing process. C12.3b

(C12.3b) Are you on the board of any trade associations or do you provide funding beyond membership?

Yes

C12.3c

(C12.3c) Enter the details of those trade associations that are likely to take a position on climate change legislation.

**Trade association**

We strive to educate public officials about our businesses, the impacts of potential policy decisions and participate in industry trade associations to assist in developing industry-wide positions, including memberships in the Edison Electric Institute, American Gas Association, Indiana Energy Association and Ohio Gas Association.

**Is your position on climate change consistent with theirs?**

Consistent

**Please explain the trade association’s position**

In general the utility trade organizations recognize the acute and chronic changes in weather patterns from changes in the climate as primary and ongoing risk to the physical energy infrastructure of their members. These groups promote adaptation and physical resiliency of...
energy infrastructure. These groups have actively worked to comply with and improve US EPA carbon emission reporting programs.

**How have you, or are you attempting to, influence the position?**
Vectren is engaged on member committees within the trade organizations to advocate for positions that support safe and reliable service to our customers as trade organization policy is developed on all matters including those related to climate change.

---

**C12.3f**

(C12.3f) What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?

Public policy decisions can affect businesses, and at Vectren we believe engaging in the political process is in the best interest of our company, employees and stakeholders. We track proposed legislation at the federal, state and local level and advocate our positions when appropriate. We strive to educate public officials about our businesses, the impacts of potential policy decisions and participate in industry trade associations to assist in developing industry-wide positions, including memberships in the Edison Electric Institute, American Gas Association, Indiana Energy Association and Ohio Gas Association. As part of our commitment to contemporary governance practices, we regularly report our corporate political activities to the Board’s Corporate Responsibility and Sustainability Committee.
