CenterPoint Energy Pipeline Inspection

March 15, 2019

Dear Property Owner,

CenterPoint Energy will be performing an additional inline inspection on our natural gas transmission pipeline. Pipeline inspections are mandated by Department of Transportation (DOT) regulations to routinely monitor and inspect our pipelines.

The scope of this work will require a survey crew to drive along the pipeline and monitor the inline inspection tool, commonly referred to as a PIG. A PIG is a tool which travels through the pipeline to gather data on its condition. You may notice contractors driving along the easement above the pipeline adjacent to your property at any time during the day.

By performing these inspections on a routine basis, pipelines will continue to operate safely for years to come. Please be aware that survey crews may pass through your property to complete this work from the week of March 18 to within the week of April 1, 2019.

If you have any questions or concerns, please visit our Construction Zone website at CenterPointEnergy.com/Construction. In addition, you can contact us directly by calling CenterPoint Energy's Communications Specialist, Hannah Gullickson: 612-321-5546.

We appreciate your patience during this project.
