CenterPoint Energy to replace natural gas pipelines in your neighborhood beginning September 2, 2015

August 31, 2015

Dear Property Owner,

At CenterPoint Energy, we are committed to providing timely and relevant information to our customers and the general public to minimize inconvenience or disruption due to our construction activities.

In preparation for a 2016 pipeline inspection project, Michels Corporation, an authorized CenterPoint Energy contractor, will be replacing approximately 1,050 feet of pipe located in highlighted area below. Construction is anticipated to start on Wednesday, September 2 and will require approximately three weeks to complete the work. We will restore the areas affected by our construction in compliance with all applicable federal, state and local regulations.

Text-to-subscribe for updates regarding this construction project by sending CNP HWY13 to 468311

The in-line inspection is performed using a sophisticated electronic device that is inserted into the pipeline to inspect for corrosion and other defects or anomalies. The electronic device commonly referred to as a PIG in the natural gas industry is battery powered and travels very slowly through the pipeline gathering and recording critical inspection data. In order for the PIG to travel as efficiently as possible through the pipeline, this preliminary construction is necessary.
